

AI ENGINEERING

The MCP starter kit

5 servers that make Claude Code
actually useful.

01 · REACH

Filesystem

Let the agent read and write the right project files — scoped to a folder, not your whole disk.

02 · SHIP

Git & GitHub

Read diffs, open PRs, and triage issues without ever leaving the editor.

03 · GROUND

Your database

Answer against the real schema
and data. No more guessed
column names.

04 · VERIFY

Browser automation

Drive a real browser to test the UI
and confirm the change actually
works.

05 · CONTEXT

Your own docs

Point it at internal docs so
answers match how your team
actually builds.

DO THIS TODAY

Start with one.

Wire a single MCP. Master it before adding the next. Dabbling in all of them is how teams stall.
